

**Carnhope Irrigation District #7
Annual Drinking Water Quality Report**
Mandatory Health-Related Standards Are Established by the Washington State Department of Health

Parameter	Unit of Measure	MCL	MCLG	Highest Detected Level	Likely Source of Contamination
				Source	
Microbiology					
28 Tests were taken during this reporting period					
Total Coliform Bactria				4	Coliforms are bacteria that are naturally present in the environment and are used as an indicator that other, potentially harmful, bacteria may be present. Coliforms were found in more samples than allowed and this is a warning of potential problems.
Fecal Coliform and E. Coli				No Detections	
Inorganic Chemicals					
Nitrate	mg/l	10	10	1.17	Runoff from fertilizer use; leaching from septic tanks, sewage; erosion of natural deposits
				Samples Taken 12/14/17	
27 Inorganic Chemicals tested during this reporting period					
No Detections above MCL					
Synthetic Organic Compounds					
73 Synthetic Organic Chemicals tested during this reporting period					
No Detections					
Volatile Organic Compounds					
62 Volatile Organic Chemicals have been tested for during this re					
No Detections					
Radionuclides					
Gross Alpha		15 pCi/l		<1+ 0.662	Date of Tests: 12/14/18
Radium 228		5 pCi/l		0.396	
Next test 2020					
Lead and Copper at the Customers Tap					
Lead		0.015			No Detections above MCL
Copper		1.3			No Detections above MCL

As you can see by the table, our system had no violations above the allowed Maximum Contaminant Levels. We're proud that your drinking water meets or exceeds all Federal and State requirements.

Abbreviations
 ND= Not Detected
 ppm = parts per million
 ppb = parts per billion
 pCi/L = picocuries per liter (a measure of radioactivity)
 AL = Action Level - concentrations of a constituent which, if exceeded, triggers treatment or other requirements
 mg/l = milligrams per liter

Notes

Maximum Contaminant Level or MCL:The highest level of a contaminant that is allowed in drinking water.

Maximum Contaminant Level Goal or MCLG:The level of a contaminant in drinking water below which there is no known or expected risk to health.

Treatment Technique or TT: A required process intended to reduce the level of a contaminant in drinking water.

Federal Action Level:The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

Drinking water, including bottled water, may reasonably be expected to contain small amounts of some contaminants. The presence of contaminants does not indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline(800-426-4791)

Some People may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemo-therapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen risk of infection to *Cryptosporidium* and other microbial contaminants are available from the Safe Drinking Water Hotline (800-426-4791)
