

Your drinking water is brought to your home by:

Spokane County Water District #3

SCWD#3 operates 8 independent water systems in Spokane County and is dedicated to making sure that every drop of water delivered to your tap is clean and safe for your family. Water District Board Meetings are held weekly on Wednesday mornings at 9:00 a.m.

Spokane County Water District #3
General Manager: Kelly Williquette
1225 N. Yardley Street Spokane, WA 99212-7001
(509) 536-0121 <https://SCWD3.org>

Making sure that communication flows freely between the District and our customers is very important to us. Keep yourself, and us, in the know and up to date with these tips:

- 1) If you haven't done so already, sign up to be notified whenever local emergencies arise. Visit www.ALERTSPOKANE.org to learn more and sign up.
- 2) Check out our website at <https://SCWD3.org> for the latest news and updates throughout the District.
- 3) Follow us on twitter!

Purpose: This report is provided to all of our customers. It describes your drinking water quality for the period of January 1st to December 31st, 2019. Your water utility is committed to supplying safe water that meets or surpasses state and federal standards and achieves the highest standards of customer service.

Water Source: Your drinking water is provided by **wells that pump water from underground sources** in and around your community. The water is recharged by precipitation in the area. These wells are closely monitored and maintained. The water is naturally filtered by the surface vegetation and the soils. However, natural systems can only do so much so we must all treat the groundwater with care to keep our drinking water clean for everyone to enjoy.

As water travels over land surfaces or through the ground, it dissolves naturally occurring minerals and radioactive material. Water can also pick up substances resulting from human activity or the presence of animals.

ENGLISH

This report contains important information about your drinking water. Have someone translate it for you, or speak with someone who understands it.

Этот отчет содержит важную информацию о вашей питьевой воде. Попросите кого-нибудь перевести это для вас или поговорите с кем-то, кто понимает это.

Contaminants that may be present in water include: disinfectants and disinfection by-products; microbes; organic chemicals; inorganic chemicals; synthetic chemicals; radioactive contaminants; and pesticides and herbicides. In order to ensure that tap water is safe to drink, Washington State and the USEPA prescribe regulations which limit the amount of certain contaminants in water provided by public water systems.

Here are some ways that can help keep our aquifer clean and limit the amount of potential contaminants that enter our water supply:

- 1.) Dispose of all chemicals properly. Take household hazardous waste to transfer stations. For help or information call: Spokane County Solid Waste Management at (509) 625-6800
- 2.) Buy the least toxic material available for your project. For more tips on going Toxic Free visit <http://www.ecy.wa.gov/toxicfreetips/>
- 3.) Don't pour anything on the ground that you wouldn't want to drink.
- 4.) Follow the directions on the label for proper use of pesticides, herbicides, and fertilizers.
- 5.) Safely store all unused chemicals.
- 6.) Keep lawn chemicals off of streets, driveways, and sidewalks so they don't get washed into storm drains or streams.
- 7.) Fix auto fluid leaks right away.
- 8.) To reduce herbicides, use mulch or fabric covers to prevent weeds.
- 9.) Do not use chemicals near open water such as streams or rivers.

Water Quality: In order to ensure that your water is **clean and safe**, we test for contaminants all year long. We are proud to report that **your water meets or exceeds all state and federal regulations**. While some contaminants were found in the water, the Environmental Protection Agency has determined that your water is safe at these levels for you and your family. Keep in mind that the presence of contaminants doesn't mean the water is unsafe. MCLs are set at very stringent levels. A person would have to drink 2 liters of water every day at the MCL level for a lifetime to have a one-in-a million chance of having the described health effect. Health related standards are set by the Washington State Department of Health.

Water Use Efficiency: In addition to monitoring the quality of the water, SCWD#3 also works to make sure we are **using water efficiently**. We set water use efficiency goals for our system in 2008, updated them in 2015, and report our progress annually.

GOAL: REDUCE ANNUAL WATER USAGE BY 21,600 GALLONS BY 2020

Annual water usage remained the same from 2018 to 2019, so we did not meet our goal this year. The District added a 3rd tier to our water rates in 2019 to encourage efficient water usage. Remember, the best way to help meet this goal is reducing your irrigation usage. Saving water not only helps the aquifer and river, it saves energy needed to pump the water and it saves you money on your bills! For more information, read the outdoor water conservation tips below.

The District set its own goal of reducing distribution system leakage below 10% by the year 2020. In 2019, we replaced some aging infrastructure inside of our well house and were able to reduce system loss from 15.1% in 2018 to 3.5% in 2019 for a 3 year annual average of 7.4%. We will continue to monitor this distribution system for leaks in hopes of remaining below our 10% goal in the years to come.

Outdoor Water Conservation Tips: Did you know that average homeowners use 30-60% of their total water use for the year outdoors? And experts estimate that 50% of that water used outdoors goes to waste from evaporation, wind, or runoff due to overwatering. Here are some easy tips to get you started:

- 1.) Only use sprinklers in the cool hours of the morning and evening.
- 2.) Adjust sprinkler heads periodically so you are only watering your grass or garden, and not sidewalks or streets.
- 3.) Increase the height of your mower. A taller lawn provides shade to the roots and helps retain soil moisture so your lawn requires less water.
- 4.) Install moisture sensors to make sure you are only watering when the plants need it.
- 5.) Plant drought tolerant species or native plants that need less water.

For more information regarding ways to save water, visit our website regularly at <https://SCWD3.org>, follow us on Twitter, or search “water conservation tips” in your web browser.

Water Meters: We are now reading your water meters 12 months out of the year thanks to **radio read meter technology**. This should help average out your water bills and be a helpful tool to catch water leaks earlier. Did you know that radio read meters give us the ability to “DataLog” the information off of your meter to generate reports such as daily or even hourly usage? This can be a helpful tool to pinpoint when that pesky leak started or why a bill is higher than normal. Give us a call today to schedule an appointment to have one of our Water Service Technicians meet you at your home and run one of these reports for you. Another great feature of radio read meters, you can now leave your insulation in the meter pit year around. Radio read meters broadcast a signal to a receiver located in a District vehicle that drives through your neighborhood, eliminating our need to visually look into your meter pit. So great news, that insulation is no longer in our way to read your meter every month!

Important Note: Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence does not necessarily indicate that the water poses a health risk. Some people may be more vulnerable to contaminants in drinking water than the general population. Immune-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by cryptosporidium and other microbiological contaminants or for more information about contaminants and potential health effects call the **Environmental Protection Agency's (EPA) Safe Drinking Water Hotline at 1-800-426-4791**.

SOURCE WATER TESTING (sample taken at the well)

CONTAMINANT	UNITS	MCLG	MCL	HIGHEST DETECTION	POSSIBLE SOURCE
Nitrate	ppm	10	10	ND	Runoff from Fertilizer Use; Leaching from Septic Tanks, Sewage; Erosion of Natural Deposits
Arsenic (2018)	ppb	n/a	10	1.4	Erosion of Natural Deposits; Runoff from Orchards; Runoff from Glass and Electronics Production Wastes
Barium (2018)	ppm	2	2	0.09	Erosion of Natural Deposits; Discharge of Drilling Wastes; Discharge from Metal Refineries
Gross Alpha (2017)	pCi/L	n/a	15	2.64	Erosion of Natural Deposits
Radium 228 (2017)	pCi/L	n/a	5	0.237	Erosion of Natural Deposits
Synthetic Organic Chemicals (2015)	ppb	Varies by chemical	Varies by chemical	ND	Varies by Chemical
Volatile Organic Chemicals (2016)	ppb	Varies by chemical	Varies by chemical	ND	Varies by Chemical

DISTRIBUTION SYSTEM TESTING (sample taken at the tap)

CONTAMINANT	UNITS	MCLG	AL	90 TH PERCENTILE	POSSIBLE SOURCE
Lead (2017)	ppb	0	15	4.1	Corrosion of the Household Plumbing Systems; Erosion of Natural Deposits; Leaching from Wood Preservatives.
Copper (2017)	ppb	1300	1300	49	
CONTAMINANT	UNITS	MCLG	MCL	HIGHEST DETECTION	POSSIBLE SOURCE
Total Trihalomethanes (2017)	ppb	0	80	ND	By-product of Chlorination
Haloacetic Acids (2017)	ppb	0	60	ND	By-product of Chlorination
E.coli Bacteria		0	A routine sample and a repeat sample are total coliform positive, and one is also E.coli positive	ND	Human and Animal Fecal Waste

RADON is a naturally occurring radioactive gas that is common in the Spokane area. Exposure to excessive amounts of radon may increase cancer risk. Your drinking water, in most cases is a very small source of radon in indoor air. For local assistance concerning radon in your home, contact the Spokane County Health District at (509) 324-1560 ext. 5

LEAD If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Spokane County Water District #3 is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from EPA's Safe Drinking Water Hotline at **1-800-426-4791** or online at <http://www.epa.gov/safewater/lead>

ABBREVIATIONS:

AL – Action Level – The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

MCL – Maximum Contaminant Level – The highest level of a contaminant allowed in drinking water.

MCLG – Maximum Contaminant Level Goal – The level of a contaminant in drinking water below which there is no known or expected risk to health.

ND – Not Detected

NA – Not Applicable

pCi/L – Pico Curies per Liter – a unit of radioactivity
90th Percentile – 90% of at-risk homes had this concentration or less of lead/copper.

Ppb – Parts per billion or micrograms per liter. About 1 drop in one of the largest tanker trucks used to haul gasoline would represent 1 ppb.

Ppm – Parts per million or milligrams per liter. About 4 drops in a 55-gallon barrel would represent 1ppm.
